VIT BHOPAL

DIGITAL LITERACY PROJECT REPORT

NAME: JAYANT YADAV

REGISTRATION NUMBER: 25BAI11172

BRANCH: COMPUTER SCIENCE ENGINEERING (ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING)

YEAR: 1ST YEAR (2025 BATCH)

COURSE CODE: CSE0001

COURSE TITLE: DIGITAL LITERACY

DATE: MARCH 2026

Introduction

As part of the Digital Literacy course, this project was designed to develop essential digital skills required in today's academic and professional environment. Acting as a Student Digital Ambassador, the objective was to create a comprehensive portfolio that demonstrates understanding of digital tools, online communication, and cyber safety.

The project consists of five tasks, each focusing on a different aspect of digital literacy, including infographic creation, building a professional online presence, exploring coding and collaboration platforms, practicing email etiquette, and understanding cybercrime awareness.

Through this project, I gained practical exposure to various tools such as Canva, GitHub, LinkedIn, and Google Forms, while also improving my ability to communicate professionally and use digital platforms responsibly.

Task 1 – Digital Literacy Infographic

For this task, I created an infographic using Canva, a popular online design tool. The infographic focuses on key aspects of digital literacy, including safe internet practices, useful digital tools for students, and maintaining a professional online presence.

The design includes visually appealing icons, short descriptions, and organized sections to make the information easy to understand for students. I aimed to make the content simple yet informative so that it could be quickly understood by my peers.

One challenge I faced was selecting the right balance between text and visuals. Initially, I included too much information, which made the design cluttered. However, after refining it, I focused on keeping the content concise and visually clean.

This task helped me understand the importance of visual communication and how design can improve the effectiveness of information delivery.

Task 2 – Student Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and Stack Overflow. Each platform serves a different purpose in building a professional digital identity. GitHub is used to showcase projects and coding work, LinkedIn helps in professional networking, and Stack Overflow supports learning through community discussions.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn, I added my education details, including my current degree at VIT Bhopal University.

These platforms will play an important role in my future career. Over the next four years, I plan to regularly update my GitHub with projects, build connections on LinkedIn, and actively participate in technical discussions.

This task helped me understand the importance of maintaining a professional online presence from an early stage.

Task 3 – Coding & Collaboration Platforms

For this task, I explored coding and collaboration tools. I completed a beginner-level coding challenge on HackerRank, which helped me understand problem-solving and basic programming concepts. It gave me confidence in writing simple logic-based programs.

In addition, I created a Google Form as a Digital Literacy Awareness Quiz consisting of five questions. This included multiple-choice and short-answer questions to test basic knowledge about online safety and digital tools. I also viewed responses through Google Sheets, which demonstrated how data can be collected and analyzed efficiently.

These tools are highly useful for academic purposes. Coding platforms help improve problemsolving skills, while collaboration tools like Google Forms make it easier to collect information and share knowledge.

This task helped me understand how digital platforms can support both learning and collaboration effectively.

Task 4 – Email Etiquette

In this task, I learned how to communicate professionally through emails and social media. A common issue in digital communication is the use of informal language in formal situations. For example, if a student sends an email to a professor without a proper subject line or greeting, it may appear disrespectful and unprofessional, leading to misunderstandings.

This could be avoided by following proper email etiquette, such as using a clear subject line, polite tone, and structured format. I also created a checklist of social media do's and don'ts, which highlights responsible online behavior.

This task improved my understanding of professional communication and its importance in academic and professional environments.

Task 5 – Cybercrime Awareness

While working on the UPI fraud case study, I was surprised to learn how easily people can be manipulated into authorizing transactions without realizing it. The fact that simply entering a UPI PIN can lead to instant financial loss was particularly concerning.

This made me realize the importance of awareness and cautious behavior while using digital payment systems. One habit I will change is being more careful while handling payment requests and always verifying before taking any action.

This task helped me understand real-world cyber threats and the importance of staying informed and alert in the digital world.

Conclusion

Overall, this project helped me develop a strong foundation in digital literacy. I learned how to use various digital tools, build a professional online presence, communicate effectively, and stay safe online. Each task contributed to improving my technical and practical skills.

The experience of organizing work in a GitHub repository also helped me understand version control and project management. This project has prepared me to use digital platforms more responsibly and confidently in both academic and professional contexts.
